Irritancy Data and Allergy Test Results

21 Day Cumulative Irritancy Assay with Delayed Challenge

Objective:	Evaluation of skin irritation potential in humans.
Description of Test:	Phillips et al (Toxic and Applied Pharmacology 21: 369-382, 1972) summarizes the method utilized for this evaluation. Fresh materials are applied daily, 5 days per week, for 21 days to the same site (patches were not moved or reapplied on the weekends).
Independent Laboratory:	Dermatologic Research Laboratory, San Francisco, CA
Date:	9 November, 2001
Results:	Average Score = 0.14 (scale 0 – 4); No sensitization occurred.
Conclusions:	The product has a low potential for skin irritation and allergic contact dermatitis.
