SYR

Welcome to SYR's latest Product Catalogue!

In operation since 1954, SYR uses our decades of experience in the cleaning industry to create our ever-growing range of high quality cleaning tools. We have always believed in the importance of cleaning, and are proud to support businesses all over the world in meeting their cleaning goals, especially in the last few years when effective cleaning systems have been vital in keeping everyone safe.

With our continuous focus on innovation, we strive to prove that efficient and effective cleaning is possible without compromising on sustainability and cost. Keeping our mission, to create a safe and simplified world of cleaning, at the heart of all we do, we continue to supply all our customers need for a range of cleaning challenges.

Lee Ann Young
Global CEO

We will Create a Safe and Simplified World of Cleaning,
Through the Manufacture of Fit for Purpose, Innovative Products
that Deliver Unique and Effective Cleaning Solutions.

West Midlands, DY9 8HG,
United Kingdom

Our Values

WE LEAD THE WAY

innovating and
inventing every day

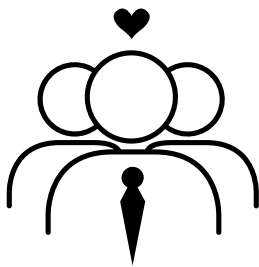

WE ACT WITH INTEGRITY

creating a positive,
functioning work environment

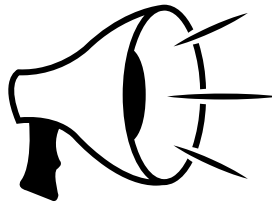

WE ARE ONE TEAM

together we make
the difference

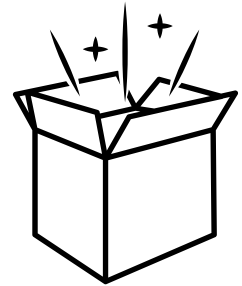

WE HAVE A PASSION FOR OUR WORK

putting people at the heart
of everything we do

WE COMMUNICATE FEARLESSLY

to build open and
honest relationships

WE DELIVER THE VERY BEST

holding ourselves
accountable in all we do

Scot Young Research's unrivalled reputation for quality has established us as a trusted manufacturer of choice across a range of industry sectors. We understand what makes each sector unique and, as a manufacturer, have the capability to design and produce bespoke products to perfectly match these requirements. Our expertise in cleaning helps teams meet their organisational goals, whilst our global logistical capabilities, combined with our strong customer focus, enable us to exceed service expectations.

Our team all share the same values and purpose, yet every one of us is unique and offer our own experiences and knowledge that others may not possess. We recognise that none of us is as smart as all of us and we value the contribution every individual makes to the success of our business. We communicate openly with each other, sharing our thoughts, opinions and ideas with members; as well as taking into consideration what others have to say. We are honest and straightforward, fostering friendship, loyalty and promoting a sense of fun into our working life.

The SYR TechTeam, comprised of skilled professionals with years of industry experience and a passion for advanced cleaning practices, offers a bespoke service. Through analysing your existing cleaning practices and producing a detailed site survey, they will help your business identify your cleaning needs and offer exclusive advice and recommendations. No matter where you or your customers are in the UK, a member of the TechTeam will arrange a suitable time to visit – and the best part is that it is a completely free service for all SYR customers.

Risk Management

Every year, slips, trips and falls are the most common cause of injury in workplaces across the UK. Although these incidents may be fairly minor, some can have serious consequences, with more than 30% of all major, debilitating occupational injuries being attributed to this kind of accident.

Although cleaning is essential for removing contaminants that may make floors slippery and unsafe, such as spillages and food debris, the cleaning process itself can be a major contributor to slip and trip hazards. From floors left damp after mopping, trailing wires from vacuums or other appliances, or substances like polish and other cleaning chemicals used incorrectly, cleaning has the potential to put both visitors and the cleaning staff themselves at risk if care is not taken.

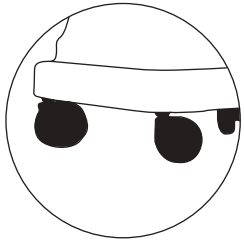

Although signs may not be a failsafe method of preventing slip-fall injuries, as such accidents often occur due to individual behavioural or physical factors, they are a useful way of encouraging those nearby to take note the hazard, whether that be a spillage or cleaning in progress, and exercise caution accordingly to ensure their own safety.

Rapid Response Cones and Kits

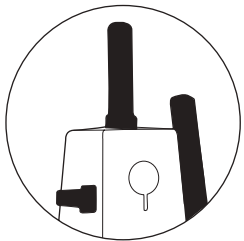

Highly visible, tall mobile safety cone, complete with durable mop holders, top handle and braked castor to prevent movement once locked. Light and easy to transport, gets to the point of the spillage fast.

Braked castor is easily locked to prevent movement.

Simply add your cleaning tools, or choose one of our readily available spill kits.

Grab the top handle and wheel cone to spillage for safer floors.

Rapid Response Cone

Highly visible, tall mobile safety cone made of tough polypropylene. Complete with mop holders, top handle and braked castors to prevent movement once locked, allowing the cone to function as a small trolley, an ideal solution for spill management.

S0015000 **Rapid response cone**

Rapid Response Kit

Wheel straight to the spill site, and take care of messes fast with the Rapid Mop. To make sure floors are left perfectly safe after cleaning, the kit also contains the Super Drying Mophead.

S0180000 **Rapid response kit**

Rapid Response Kit contains:

- 1x Rapid Response Cone
- 1x Rapid Mop
- 10x Microfibre Head
- 1x Interchange Handle
- 1x Snapper Frame
- 1x Super Drying Mophead

Rapid Response System contains:

- 1x Rapid Response Cone
- 1x Dual Mop
- 2x Microfibre Heads
- 2x Super Drying Mophead
- 1x Lipped Lobby Pan
- 1x Squeegee Brush

Rapid Response Spill Kit

Mop floors, sweep breakages and squeegee up liquids with this complete kit. The Rapid Response Safety Cone functions as a small trolley.

S0191000 **Spill kit response system**

Rapid Response Spill Kit contains:

- 1x Rapid Response Cone
- 1x Rapid Mop
- 10x Microfibre Head
- 1x Lipped Lobby Pan
- 1x Squeegee Brush

Rapid Response System

The premium kit for effective sweeping, mopping, squeegeeing and drying of floors. The Squeegee Brush is available in a colour-coded range to help prevent cross-contamination when cleaning.

Clip-it II Kentucky Mop Holder

Simple clip style holder for Kentucky mops. Teeth ensure mophead stays securely in place.

SS706	Red	SS708	Green
SS707	Blue	SS709	Yellow

Clip-it sockets reduce plastic waste, as only the used mop is disposed of, leaving the ferrule to be used again instead of needlessly sent to landfill

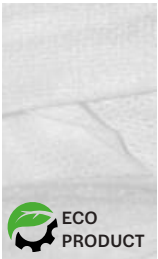

Cotton

The most popular type of material used for mops, cotton is renowned for its versatility, suitable for use on different hard surfaces and ideal for cleaning up different types of messes and contamination. Cotton is also an absorbent material; due to its natural hollow fibres.

PY Cotton - A mixture of polyester and cotton provides excellent durability.

Twine Cotton - A thinner, more durable cotton yarn. Most effective for rough or uneven surfaces.

Multifold Cotton - A combination yarn to create a hard wearing mop for heavy duty cleaning.

SYRSorb

One of SYR's exclusive mop materials, SYRSorb is a semi-disposable mopping solution designed to meet high standards of hygiene and sustainability. Created from offcuts of synthetic, non-woven fibre materials used to make hygiene products, these lightweight and highly absorbent mops are non-linting and non-rotting. SYRSorb is made from offcuts that previously would have been discarded as waste. SYRSorb works to reduce the volume of waste sent to landfill, doing our part for the planet whilst still ensuring an impeccable cleaning performance.

SYRTex

A premium quality mop material designed by SYR, SYRTex are highly durable reusable mops, available in different weights and sizes to suit different environments and mopping requirements. Made of a long-lasting polyester blended yarn that is 10 times stronger than cotton, SYRTex mops are fully absorbent from new to offer an effective cleaning performance, with a fast pick-up of dirt and dust and quick water release. As they are so durable (launderable whilst still retaining their quality), these mops are both a cost effective and sustainable solution for daily mopping.

Microfibre

Commonly used for flat mops, microfibre is a synthetic material designed for superior micro-organism removal and a highly efficient cleaning experience. Absorbent and lightweight, microfibre mops require very little water for optimal results, cutting water usage by as much as 90%, as well as minimal chemical use, removing dirt, dust and germs from surfaces and trapping them within the weave using only water.

Kentucky or Socket Mop?

Although mops can come in a wide variety of sizes and materials, most will usually fall under two categories: Kentucky and socket mops. These two types may appear similar but each have attributes that make them suited to different areas of cleaning and different cleaning requirements.

Socket mops are the most commonly used type of mop in the UK. Cost effective, durable and ideal for a variety of different mopping tasks, socket mops differ from Kentucky mops in that they are more suited to small to medium sized areas, making them popular in both households and a range of different commercial environments. These smaller mops tend to be compatible with smaller buckets, and are often used with round wringers due to the round socket.

Kentucky mops are usually larger and heavier, with a longer yarn and band to prevent mop strings tangling. With a high water absorbency, these mops are primarily used to clean larger space areas, including schools, hotels, hospitals and factories, mopping in a fraction of the time of a dolly mopping system.

As Kentucky mops tend to have a longer, flatter ferrule or require a plastic or metal clip holder to hold the mop in place, they are not always suitable for use with every bucket or wringer. Due to the larger size of Kentucky mops, compatible buckets and wringers tend to be bigger too, both to accommodate their size and ensure that maximum water is wrung out during use.

SYRSorb mops are designed to be a semi-disposable solution to concerns of mopping hygiene and sustainability, offering a safer and more effective clean compared to most traditional mops, and a more eco-friendly option than single use products. Made of synthetic, non-woven fibre, these premium mops will not rot like cotton, staying fresher for longer, non-linting and fully absorbent from new. SYRSorb’s man-made fibre is manufactured from offcuts of the materials used to make hygiene products, scraps that previously would have been discarded as waste. So, with every purchase of a SYRSorb mop, businesses can be assured that they are making a good decision for the environment, minimising the volume of products sent to landfill.

Several of the mops in the SYRSorb range are also looped and banded, ensuring durability and maximum liquid retention whilst mopping. In a variety of shapes and sizes – from long Kentucky mops, ideal for cleaning large areas, to mini socket mops, great for everyday cleaning where space is at a premium.

SYRSorb offers the ultimate in hygiene mopping, whatever your business’ cleaning requirements. With just a small change from cotton to SYRSorb, your business can eliminate one of the worst hidden sources of bacteria from your workplace, keeping your staff, visitors and customers safer.

BUCKET WITH A
MULTITUDE OF USES**

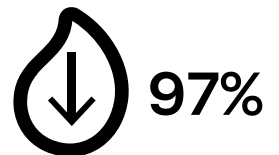

Bucketless Spray Mopping

Clean more with less

An innovative alternative to traditional mopping techniques, a spray flat mopping system is the ideal solution for ensuring sustainability, efficiency and an exceptional cleaning performance for daily mopping tasks. A flat mop with an internal water reservoir and spray trigger, spray flat mopping systems are designed to work effectively with minimal water use, offering controllable moisture through spray jets at the base of the mop dispensing water directly onto the ground.

The Rapid Mop reduces water usage by 97% compared to mopping with a standard bucket, wringer and dolly mop, saving 7000 litres of water a year with daily use.

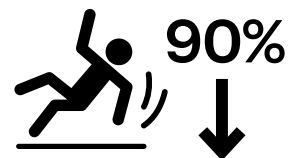

Created as a quick and easy solution to daily light mopping and spill management, the Rapid Mop is a premium product that combines the cleaning potential of spray flat mopping with microfibre cleaning pads for ultimate efficiency. A light and mobile bucketless mopping system with 480ml internal reservoir and triple spray jets, the Rapid Mop is available with a choice of powerful and highly absorbent microfibre flat mops to offer an exceptional removal of dirt, dust, liquid spills and even bacteria, with only minimal water and chemical usage.

The Dual Mop

The Dual Mop is a high quality spray mopping system, with extra innovative feature to deliver the ultimate in safe and efficient cleaning. Complete with a 480ml internal reservoir and triple spray jets, the Dual Mop allows the perfect amount of cleaning solution to be dispensed onto floors for cleaning, reducing not only the volume of cleaning wastewater that is produced but also leaving floors significantly drier after mopping.

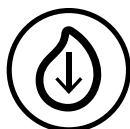

Ensuring your floors are always clean and dry could cut the risk of slip fall incidents by 90%.

The Dual Mop takes an extra step to ensure floor surfaces are left as safe as possible after mopping. After cleaning floors with the compatible Microfibre Cleaning Flat mop, a durable mop offering an exceptional removal of dust, dirt, liquid spills and bacteria from floor, the head of Dual Mop can be easily flipped over to the Microfibre Drying Flat mop on the other side. This highly absorbent flat mop is capable of removing leftover water and cleaning solution with ease, perfect for rapidly drying floors after mopping or cleaning of spillages.

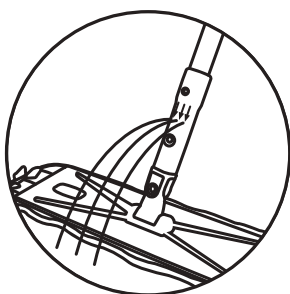

Triple spray jets

Reduces water usage

Pads sold separately.
Found on pages 52-58.

At the push of the button three jets are sprayed from below the three arrows.

Unscrew the top section of the Rapid Mop to fill. Screw back on to press the thumb button.

Rapid Mop Waterfed Pole

A light and mobile bucketless system which provides controllable moisture to give smear free dry floors. Ideal for daytime cleaning in lightly soiled areas. 145cm long. Features a 480ml internal water reservoir.

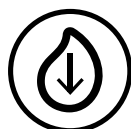

993493

Frame and Handle

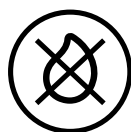

Triple spray jets

Reduces water usage

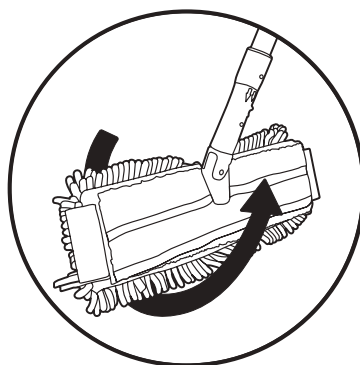

Leaves floors dryer

Dual Mop Waterfed Pole

A bucketless mop system with a 480ml internal water reservoir in the handle that sprays water ahead of the mophead. Once the area is cleaned, simply flip the mop over to dry the floor. Includes colour coded rings.

S0047000 **Frame and Handle**

Fill and control the Dual Mop in the same way as the Rapid Mop, pressing the thumb controlled button to spray three jets.

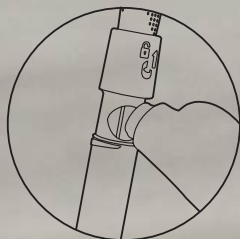

Once floors are cleaned, flip the mop head to dry the surface with Dual Mop Drying Flat Mop.

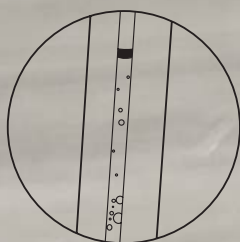

Pads sold separately.
Found on page 55.

Fluid II Bacteriostatic

Easy to fill, simply unlock opening and lock after filling.

Autoclavable sponge

Autoclaving is a method of sterilising sponges with very hot water vapour. It is normally carried out by the end user on a relatively small scale, and is common practice in clean rooms, morgues, hospitals, labs ect. The autoclaving process is carried out to reduce the risk of cross contamination and is conducted just before the sponge is used or re-used.

Swop Mop Cellulose Sponge

Highly absorbent cellulose sponge head for the Swop Mop, ideal for mopping up large spillages. Autoclavable up to 120°.

800934 **29.7cm**

Floor Maintenance

Making sure floors are kept clean and well-maintained can be one of the most important tasks when it comes to cleaning. When a visitor arrives on your business' premises for the first time, the floor is often the first thing they notice, so if it is visibly dirty or worn this could have serious ramifications for reputation. Well-kept floors are also vital for ensuring safety of all on the premises. Dirt, dust and germs are carried from outside and between different areas on shoes and trapped within floor surfaces, creating a cross-contamination risk. These poorly maintained floors can be a hazard in terms of slip-fall accidents, with poor floor quality frequently being regarded as the most common cause of slips and falls.

Using the correct methods and equipment is vital when cleaning floors, taking into the account the requirements of different areas and floor surfaces. SYR stocks a wide range of high quality tools for floor cleaning, ideal for both general maintenance and more detailed work. SYR's brushware is suitable for versatile floor maintenance tasks, from the compact angled Grout Brush for cleaning grout between tiles and floor edges, to Traditional Brooms for indoor sweeping. For larger space areas, SYR Floor Pads, made from water-based resins and 100% recycled fibres, are designed to work with floor machines to deliver an exceptional cleaning performance whilst supporting the environment with every use.

Surface Cleaning

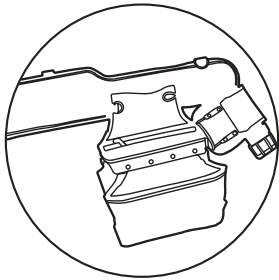

Surface cleaning is essential in maintaining safety in any environment, halting the spread of potentially dangerous bacteria and viruses across the premises in addition to keeping up appearances. Common surfaces like tables, chairs, doors and other key touchpoints can very easily harbour high germ levels, creating a health risk, so regular and effective cleaning of surfaces is an important measure in ensuring high hygiene standards are met.

SYR's specialist solutions are created to deliver a high cleaning standard without compromising on sustainability and cost. Stock your cleaner's cupboard with surface cleaning essentials, from our range of premium quality microfibre products – super soft and capable of picking up the smallest particles of dirt and dust with ease – to our eco-friendly Super Cloths, Hand Pads and Single Use Cloths, all highly durable and made using recycled materials.

Allclean Eraser Sponges

This eraser sponge is not pre-treated, and it doesn't need to contain any chemicals to work its magic. Each sponge measures 12cm x 6.5cm x 3cm.

S0347000 Allclean Eraser Sponges

Dust Control

Whether your business is focused in facilities management, QSR's or healthcare, maintaining dust levels is an important step of cleanliness and health.

In addition to keeping up appearances, which is often the primary reason for dusting, the practice also carries with it a range of health benefits, if left unmaintained, dust can build up over time, potentially impairing air quality and worsening respiratory conditions in those exposed. SYR's dust control range provides the ideal way to remove these substances, as well as any pollen allergens that may start to appear in the spring seasons, preventing them from becoming a more serious problem.

Please get in touch with our Techteam today to look at a more tailored approach to your dusting requirements and what tools will work best for your business.

Heavy Duty Short Interchange Handle

Durable aluminium pole with colour-coded hand grip and black Interchange ferrule. 60cm / 1.95ft long, perfect for low level dusting in confined spaces.

Telescopic handle. The grip points rotate freely to provide incredibly easy and instinctive mopping motion and grip. Helping to reduce musculoskeletal disorders (MSD).

S0621000 **Watson handle**

Sherlock

Premium lightweight aluminium frame with movable ball joint for easy access under furniture. Its patented mop handle to frame ball design connector allows easy hands-free attachment of mopheads. 40cm wide. For hook & loop style flat mops.

S0622000 **Sherlock**

Breakframe

Hygienic and durable flat mop frame, ideal for intensive daily use. Complete with magnetic locking system and ergonomic 360° rotating connection. For pocket-style flat mops.

S0623000 **Breakframe**

Dust Mop Grey

Dedicated to electrostatic dry mopping. It is used dry and picks up hair, fur and other larger bits of dirt at the front, while the back deals with smaller particles.

S0628000 **Dust Mop**

Trollies

Innovative trolley systems

SYR's range of high quality cleaning trollies and carts are designed to help businesses achieve the ultimate in efficiency in their daily cleaning routines. The perfect companions to a variety of cleaning tasks and requirements in different environments, all of the trollies in this range are highly durable, tough enough to withstand repeated daily use whilst still being easily manoeuvrable.

Cleaning trollies are essential in many daily cleaning routines, easily transporting large amounts of equipment between areas, especially useful when completing multiple different cleaning tasks in busy periods. Also ideal for storing tools when not in use, trollies help cleaning teams to maximise on available space, as well as improving organisation and safety by keeping equipment secure.

With a wide range of trollies available, including larger size housekeeping carts, mopping trollies with buckets and compact specialist solutions, SYR has something suited to every cleaning challenge.

Innovative trolley systems

Designed and built to last

The quality of SYR Motion trolleys means durability, ergonomics, usability and aesthetics. All products are designed and built to last for many years, because a truly sustainable production from an environmental point of view provides that a trolley can be repaired, upgraded or transformed for different uses.

**Wherever possible
Motion cleaning trolleys
are certified EPD.**

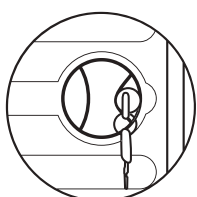

Motion Pro 2

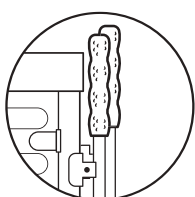

Fully enclosed lockable trolley system, suitable for pre-impregnated flat mopping. Features lockable castors, 2×20 litre sealable side storage buckets, 4×6 litre hand buckets and mop handle and frame storage. Made from recycled materials.

Motion Pro 5

Enclosed trolley system, with separate waste bag. Suitable for wet mopping. Includes lockable storage area and two 15 litre mop buckets. Made from recycled materials.

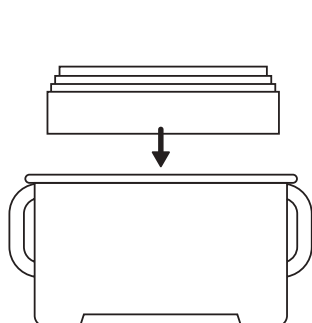

🔑 S0502000

Motion pro 5

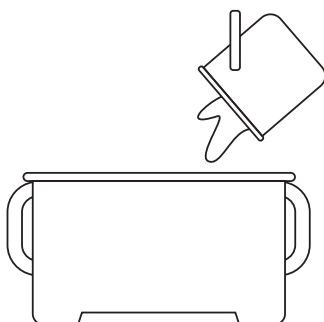

Pre-impregnated mopping

Some of our Motion trolley range are designed to accommodate pre-impregnated flat mopping. By dosing flat mop pads in bulk prior to cleaning, staff have everything they need to keep working without the need to re-stock at a cleaners cupboard or prepare flat mops on the go. Not only does this provide time and labour saving benefits, but it prevents the need to prepare mops in public areas, limiting the risk of unnecessary chemical exposure and spills.

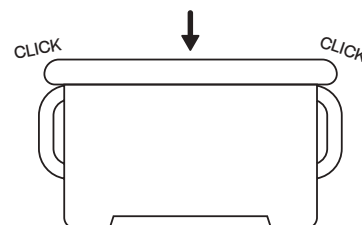

Step 1

Place 10 pads into bucket.

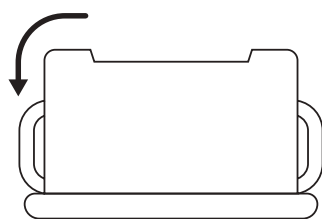

Step 2

Pour approx 1L of water or cleaning solution into bucket.

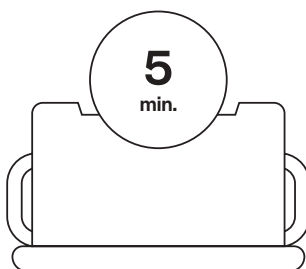

Step 3

Place lid on bucket clicking into place.

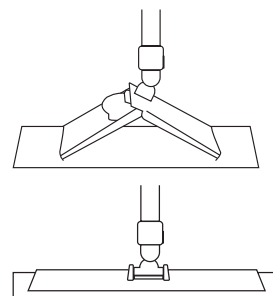

Step 4

Flip bucket over.

Step 5

Leave 5 minutes contact time, then store upright on trolley.

Step 6

When ready to clean take out dosed pad and attach to frame.

EPD®
THE INTERNATIONAL EPD® SYSTEM

Ball-Grip Handle Flat Mop Frame

Frame with hook and loop fitting, compatible with short term disposable mop heads, as well as Silver™ and loop back flat mops. Fits Telescopic Handles. 40cm x 8cm.

X0007000 **40cm**

Dispad

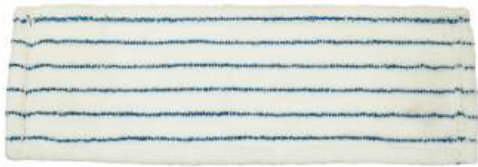

The interface between frame and mop, creating a stable mopping surface. Used in conjunction with Disposable Flat mop Pad and Rapid Mop. 40cm.

X0215202 **Dispad**

Disposable Flat mop

Cost effective pad for use with flat mopping systems, including the Rapid Mop. Warp knitted, providing fast and efficient removal of dust, dirt and bacteria. Used in conjunction with Dispad (adjacent), sold separately. 40cm.

994551 **Disposable flat mop**

Short Term Damp Flat mop

Cost effective damp flat mop made of quality microfibre, offering rapid dirt and moisture pick-up. Suitable for flat mopping systems including the Rapid Mop, attaching with a hook and loop fitting. Complete with colour-coded tabs to designate to colour-coded cleaning areas.

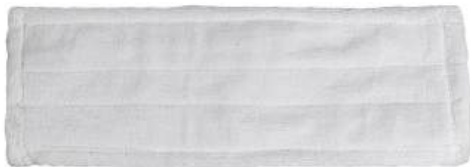

X0011000 **Short term damp flat mop**

Dry Dusting Flat mop

Short-term dry mop pad, made of a quality microfibre, ideal for dusting, sweeping and polishing tasks. Suitable for flat mopping system including the Rapid Mop, and complete with colour-coded tabs to designate to colour-coded cleaning areas.

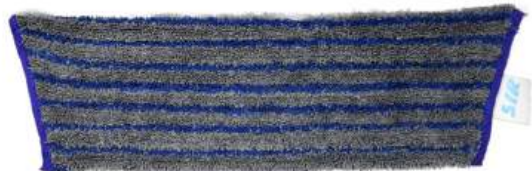

X0010000 **Dry dusting flat mop**

Heavy Duty Flat mop

Damp flat mop pad, made of a high quality microfibre. Offers an effective pick-up of dirt and dust, with only minimal water usage. Colour-coded tabs. 40cm.

X0016000 **Heavy duty flat mop**

Scrub Strip Flat mop

A powerful cleaning pad for use with flat mopping systems, including the Rapid Mop. Microfibre with scrubber strips to break up stubborn dirt. Ideal for dry dusting, sweeping and polishing. Launderable. 40cm.

X0013000 **Scrub strip flat mop**

Fringed Scrub Flat mop

A powerful microfibre scrubbing pad for use with flat mopping systems, including the Rapid Mop. Features grey scrubbing strips and a fringed edge for extra mopping power, without using cleaning chemical solutions.

X0014000 **Fringed scrub flat mop**

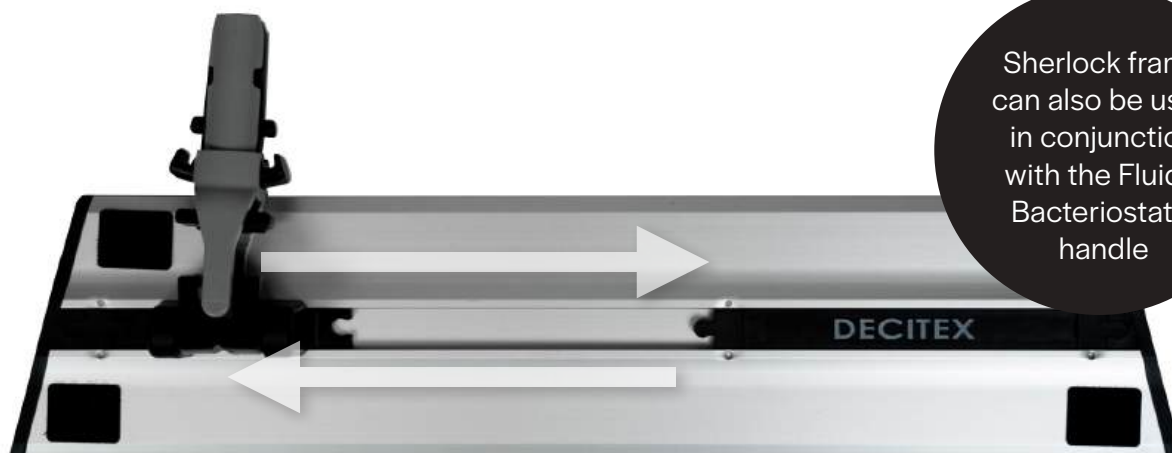

Motion Laundry Bag

The synthetic material net mesh Laundry Bag with locking closure helps protect mops, microfibre pads, and other cleaning items during laundering in a commercial or industrial setting.

✂ S0520000 **Laundry Bag**

Sherlock Frame

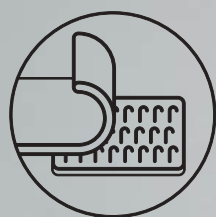

Sherlock frame can also be used in conjunction with the Fluid II Bacteriostatic handle

Our newest flat mopping frame features an innovative slide-across feature, this works in conjunction with the ball joint to provide a new level of ergonomics and access when dealing with hard to reach areas under counters, chairs and tables.

Holding the handle firmly, use the side of your foot to kick the ball joint, sliding it along the rail and locking it into the end of the frame.

Lockable pivot for easier cleaning on walls and awkward angles

Simple hook and lock system to attach and swap pads

HOOK &
LOOP

Sherlock Frame

Premium lightweight aluminium frame with movable ball joint for easy access under furniture. Its patented mop handle to frame ball design connector allows easy hands-free attachment of mopheads. 40cm wide. For hook & loop style flat mops.

S0622000 **Sherlock Frame**

HOOK &

 **SYR**
switch

Our recycled range makes it easy to switch to more sustainable choices.

Help save
water

Prevent landfill
waste

Reduce virgin
plastic use

The SYR SWITCH range uses waste materials destined for landfill, recycled plastics and regrind plastics, combined with thoughtful design.

We use our manufacturing expertise and state of the art production techniques to minimise product waste and maximise product life expectancy whilst creating a product that will support the environment through :

- Reducing water consumption.
- Reducing plastic waste over its lifetime.
- Reducing chemical usage.
- Recycling materials destined for landfill.
- Reducing volume of waste being sent to landfill.

Safeguard-R Caution A-Sign

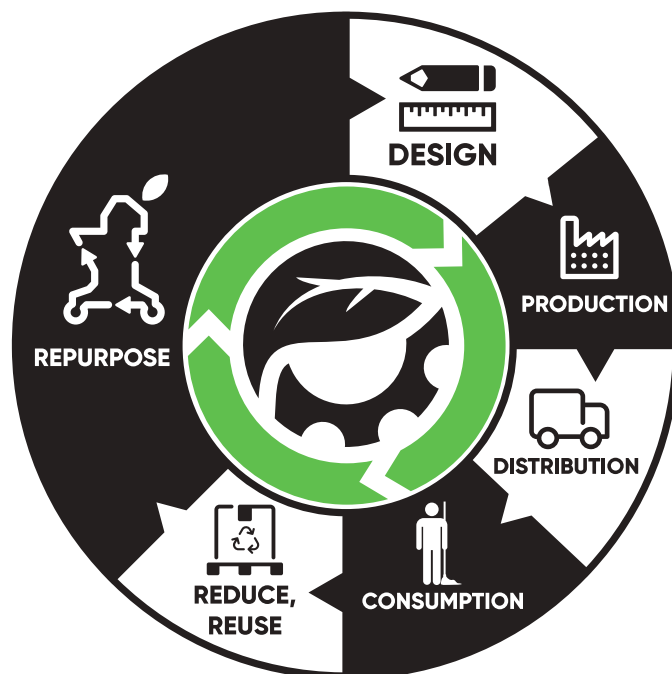

Durable polypropylene safety warning sign, made from 100% recycled materials. Printed using injection moulding, to ensure high resolution and prevent fading. Complete with an innovative top clip design to prevent the sign from tipping when in use.

S0340000 **Safeguard-R**

Introducing our
new initiative -

SYR

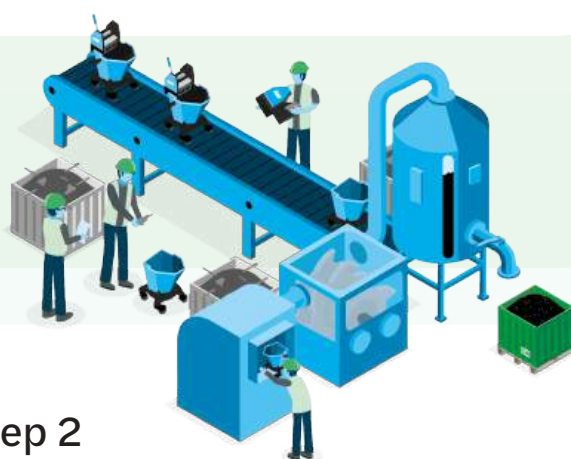

SWITCH Framework

Step 1

Delivery of old product

Customers send their old, discarded polypropylene products back to SYR, saving them from landfill.

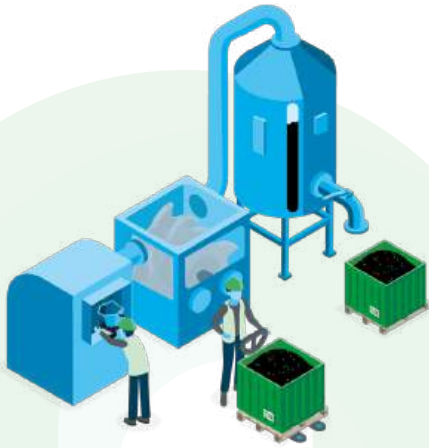

Step 2

Disassembly

Once at the recycling facility, the products are taken apart, removing any metal components, such as screws, handles and wringers. These materials are then recycled.

Here at SYR, driving sustainability in all that we do is one of our top priorities. We recognise that as a large scale producer of plastic products we have a responsibility to minimise the waste we produce as much as possible, and do our part to have a positive impact on the environment. This has driven us to explore numerous innovations in the last few years.

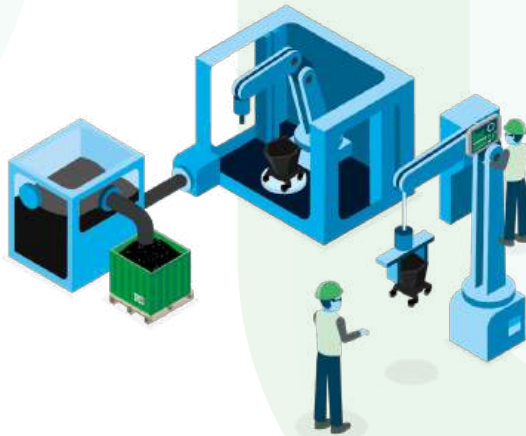

Now, to continue our goal of reducing waste wherever we can, we are launching a brand new and exciting scheme for our customers: Switch Framework. This is one more way that SYR are aiming to redefine our business and further our goal of transforming SYR into a truly sustainable manufacturer, by creating a circular economy, and making the most of the earth's finite resources through intelligent design solutions.

Step 3

Pelletisation

The remaining plastic is cut down to size and placed into a specialist recycling machine, where it is ground down into pellets.

Step 4

Injection moulding

The pellets are melted down and shaped however desired using the injection moulding technique.

Step 5

Assembly

After the plastic is shaped, components such as castors, handles and wringer are fitted to form the final product.

Step 6

Delivery of new product

The new durable product, made from recycled materials, is ready to be packaged and shipped out to customers.

We know we are biased, but we believe our products are far too beautiful to end up in landfill – so please return your end-of-life SYR buckets and polypropylene plastics and we will repurpose them into new SYR Switch products.

Lucy-R Oval Socket Mop Bucket

Extra tough mop bucket made using recycled plastic. Featuring a convenient colour-coded handle and durable wringer sieve, compatible with Freedom II mini mops and socket mops.

S0636000 **Bucket sachets**

Degreaser Floor Cleaner

Suitable for use on floors to cut through daily grease build up.

S0661000 **Bucket sachets**

SYR
essentials

What is PET plastic?

PET is short for polyethylene terephthalate, a strong yet lightweight plastic found in a variety of everyday products. Versatile and easily moulded during manufacturing, PET is most commonly used in packaging for food, drink and other household products, making up 41% of all plastic packaging in the UK.

Resistant to micro-organisms and chemicals, PET forms durable products, but these qualities can also make the material problematic to dispose of. PET takes an estimated 450 years to decompose, and with 3.2 billion PET bottles wasted by the UK yearly, this can be harmful to the environment.

Fortunately, PET is easily recyclable, and 99% of UK localities now offer household recycling collection of mixed plastics packaging. After being sorted, washed and melted down, recycled PET can be reused for a multitude of different purposes, making not only new plastic bottles and other packaging, but even clothing and now cleaning materials.

Interchange Pad Holder

Durable plastic holder for Floor & Wall Pads; add your choice of pad to strip, scrub, buff or polish. Fits SYR Interchange handles.

920050

Pad holder

Edging Pads

Pad to fit the Interchange Pad Holder. Made from recycled plastic bottles. Tough on ground-in dirt, stains and heel marks. In a choice of pads to strip, scrub, buff or polish.

Did You Know?

One 20" pad is equivalent to seven 16oz (480ml) plastic bottles.

A sustainable way to clean every day.

At SYR we created our professional 'Rapid Mop' and 'Dual Mop' Spray flat Mop Systems, both of which are light, mobile and ideal for daytime cleaning in lightly soiled areas. Water is simply poured into the 480ml internal reservoir, which is then dispensed via a thumb operated button on top of the handle. The water is pumped forwards out of three jets placed above the pad holder, as and when required, ensuring only the perfect amount of water is distributed.

It is essential when 'cleaning with less' that a good level of performance is maintained to ensure resource efficiency – our large range of compatible, colour coded microfibre flat mops ensure that we are able to provide solutions for a range of everyday jobs. Chemical use reduction, combined with labour savings and waste water elimination allows our SYR Spray flat Mop systems to offer a more sustainable cleaning process.

Microfibre Flat Mop

A general use cleaning pad for the Rapid Mop system. Launderable and highly absorbent.

993103

Microfibre pad

Rapid Mop Waterfed Pole

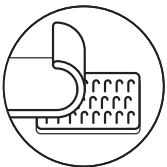

A light and mobile bucketless system which provides controllable moisture to give smear free dry floors. Ideal for daytime cleaning in lightly soiled areas. 145cm long. Features a 480ml internal water reservoir.

993493

Frame & handle

97% Spray flat mopping uses 97% less water than a traditional mop & bucket.

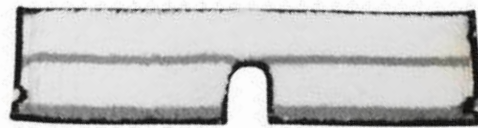

Mops fit Dual Tech frame using hook and loop

Dual Mop Waterfed Pole

A bucketless mop system with a 480ml internal reservoir in the handle that sprays water ahead of the mophead. Once the area is cleaned, simply flip the mop over to dry the floor. Comes with colour coded rings.

Complete MST Kit

Complete kit contains 600ml bottle, white trigger spray, 5 blue microfiber pads and an MST tool.

994289

Complete kit

1 MST Pad Covers the Same Surface Area as 30 Rolls of Paper*

Blue roll has a number of key properties that make it particularly useful across a multitude of working environments and tasks. Unfortunately it is single use, cannot be recycled and is over consumed and used inappropriately. It is also very often combined with excess chemical dispensing, which not only leaves surfaces looking unclean and full of smears, but also increases cleaning costs.

So let us introduce you to another option...

SYR Multi Surface Cleaning Tool provides a more cost effective solution with superior cleaning results and can complete up to 80% of the tasks blue roll is commonly used for.

*based on average use and conditions

Scan QR code learn how MST can help you reduce blue roll use

Made from at least 95% recycled plastic

80L Store Bin & Lid

The durable dustbin comes complete with a tight-fitting, removable lid and is suitable for both indoor and outdoor use. The bin has a glossy plastic finish, which is waterproof and is easy to wipe clean.

S0700209 **80L Bin & Lid**

in partnership with

SYR

In operation since 2000, Decitex is a manufacturer of specialist textile products for the professional cleaning market. Supplying a range of products, including cleaning cloths and flat mops, Decitex are nationally recognised for the quality of their microfibre products, already ranked number 2 in the area of specially targeted microfibres. With an ever-evolving selection of products available, Decitex keeps at their heart a passion for innovation, as well as a set of core values for commitment to their customers, communities and environment – something they have in common with SYR.

Like SYR, Decitex are committed to finding innovative solutions through research and development, carefully curating designs to maximise performance and continue to deliver the very best for their customers. This is what make them the perfect partner for SYR in our mission to create a safer and simplified world of cleaning, and we are excited to introduce SYR customers to these amazing products.

From single-use and reusable cleaning cloths, to dusters and flat mops, Decitex are widely renowned for their high quality microfibre products, but what is it that makes Decitex's microfibre so impressive?

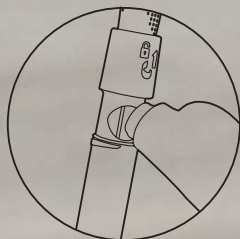

Created through a process of splitting fibres under high pressure, microfibre is made up of super fine filaments with tiny gaps between the split fibres, allowing dirt to be trapped with the fabric to effectively remove it from surfaces. The quality of the microfibre ultimately determines how well it will perform in cleaning, which is how Decitex products, with their high density weave and super thin fibres, have earned their reputation for offering an exceptional cleaning performance.

With a selection of flat mops available, all of these new microfibre products have been designed to ensure an efficient removal of dirt, dust and even microscopic bacteria from surfaces. Suitable for both wet mopping and dry dusting, many of these mops are also usable with SYR's Flat Mop Frame and Interchange Handles, allowing them to seamlessly be incorporated into your existing cleaning system.

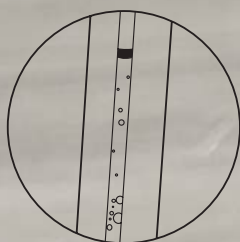

Also available in the new Decitex range is the Fluid II Bacteriostatic. Created after years of research, this versatile handle forms part of a highly effective spray mopping system; the lightweight handle, which has been treated with a specialist antimicrobial treatment to protect the internal surface, has a water capacity of half a litre and triple spray jets for quick and efficient cleaning. To use, simply fit with the Sherlock Flat Mop Frame and your choice of flat mop pad, such as the Ultimate Delux, a durable microfibre mop offering 2-in-1 flat mopping and drying with excellent absorbency and soil removal.

Fluid II Bacteriostatic

Easy to fill, simply unlock opening and lock after filling.

Simple to follow float system to find out how much liquid is left inside Fluid II handle.

Goldshield®
antimicrobial treatment
to inhibit bacterial
contamination of
internal Fluid surfaces

Sherlock Frame

Sherlock frame
can also be used
in conjunction
with the Fluid II
Bacteriostatic
handle

Our newest flat mopping frame features an innovative slide-across feature, this works in conjunction with the ball joint to provide a new level of ergonomics and access when dealing with hard to reach areas under counters, chairs and tables.

Holding the handle firmly, use the side of your foot to kick the ball joint, sliding it along the rail and locking it into the end of the frame.

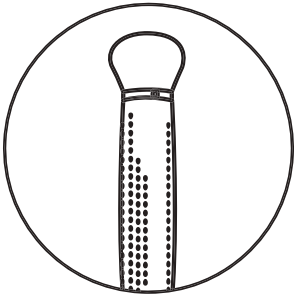

Lockable pivot for
easier cleaning on walls
and awkward angles

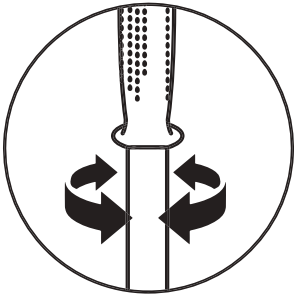

Simple hook and lock
system to attach and
swap pads

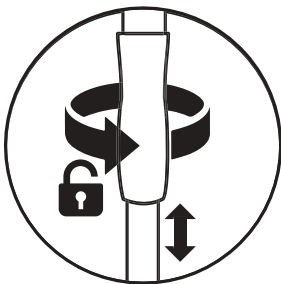

Ergonomic and perforated grip for extended periods of use

Smooth bearing allows for free rotation of grip from handle

Handle is extendable with a screw lock function

Sherlock

Premium lightweight aluminium frame with movable ball joint for easy access under furniture. Its patented mop handle to frame ball design connector allows easy hands-free attachment of mopheads. 40cm wide. For hook & loop style flat mops.

S0622000 **Sherlock**

Breakframe

Hygienic and durable flat mop frame, ideal for intensive daily use. Complete with magnetic locking system and ergonomic 360° rotating connection. For pocket-style flat mops.

S0623000 **Breakframe**

Watson Handle

Telescopic handle. The grip points rotate freely to provide incredibly easy and instinctive mopping motion and grip, helping to reduce musculoskeletal disorders (MSD).

S0621000 **Watson handle**

Window Cleaning

Did you know that SYR started life as a window cleaning business?

Beginning in 1954, we expanded from a small local company to an international business. Even as we made the transition from service to manufacturing, and started creating the products rather than using them, we still kept at our heart our mission to create a safer and simplified world of cleaning, through innovative, durable and easy-to-use products. Our extensive window cleaning range is evidence of this commitment, with products designed to deliver the best cleaning standard possible. From high quality squeegees, T-bars and sleeves to remove even the toughest grime and leave windows sparkling, to SYR's exclusive Cleaners Tool Belt for keeping all equipment close at hand, we have used our history as experts in window cleaning to help our customers to achieve a superb cleaning standard.

Winwash T-Bar

Litter Control

Taking care of all waste and litter across your business premises is an essential step in maintaining good appearances and hygiene standards. In addition to looking untidy, poorly managed waste can harm both people and planet - litter contaminates waterways and other natural environments if left uncollected, and waste can be a huge contamination risk if it is not stored correctly.

SYR has all you need to form an effective litter control strategy, prioritising hygiene and efficiency by safely and responsibly disposing of waste and preventing build-ups of litter both indoors and outdoors. From litter pickers and lobby pans for removing waste on the go, to our range of bins and waste receptacles that offer safe and secure storage, SYR products are trusted as an effective waste management solution across a variety of environments, from schools to hospitals.

Chemicals

An essential in most cleaning routines, choosing the correct chemical product can be one of the most important steps in ensuring cleaning is performed safely and to a high standard. In addition to tailoring chemical cleaners to the specific cleaning task, chemicals should also be carefully chosen to minimise potential risk, as such products have been found to be harmful to both the environment and human health with long term use.

Like all of SYR's products, our range of chemical cleaning products is constantly evolving and expanding, developing new solutions for a safe and reliable cleaning performance not at the expense of the environment. Our intelligent chemical solutions, like the new SYR Essentials range, are an innovative alternative to traditional chemical products, prioritising safety and sustainability, reducing waste and improving efficiency whilst still performing exceptionally against all manner of dirt, grime and bacteria on surfaces.

Anti Viral Cleaner

Can be used for daily cleaning to minimise the spread of infection.

S0660000 **Bottle sachets**

Anti Viral cleaner tested to EN14476+A2:2015, A2:2019, also tested to EN1276 and EN13697 tested in dirty conditions

Neutral Floor Cleaner

Suitable for use on hard and polished floors.

S0636000 **Bucket sachets**

Degreaser Floor Cleaner

Suitable for use on floors to cut through daily grease build up.

S0661000 **Bucket sachets**

SYR essentials

Reduce Carbon Footprint by 95%

Compared to transporting the old liquid style chemicals

Vegan

Products are fully
vegan in formula

Biodegradable, Pre-Dosed Formulation

No risk of chemical overdosing, which has the
potential to negatively impact the planet

No Single Use Plastic

Dosing bottles are reused, this reduces waste.
Delivered in planet friendly packaging.

Cruelty Free

We have never had our products, or our raw
materials tested on animals

Exceptional clean without costing the Earth.

Overdosing of chemical cleaners is a common problem in daily cleaning routines, with staff frequently using incorrect portions of chemical when cleaning. In addition to wasting money through excessive water and chemical consumption, irresponsible handling of chemicals, using more than needed for the task at hand, can also have potentially serious effects on both the environment and on human health through exposure to harmful substances.

To prevent this, it is vital that all cleaning chemicals are used responsibly, accurately measured and diluted following manufacturer's instructions. Increasingly, cleaning products that are highly concentrated or are already pre-dosed are becoming popular as an eco-friendly solution to prevent waste and save money. The SYR Essentials range of cleaning chemicals has been designed specifically to help prevent overdosing, protecting the environment whilst still delivering an exceptional cleaning performance. Available in the form of concentrated solutions and soluble sachets, the exact amount of chemical needed for the task at hand can be dissolved in water, resulting in accurate dosing and a significant reduction in the production of water and chemical waste.

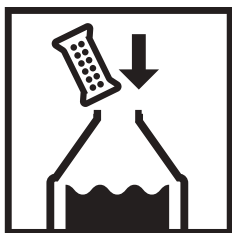

Aside from releasing chemicals into waterways, one of the main environmental drawbacks of chemical cleaners is often the packaging, with most using single-use plastic containers that end up in landfill. In addition to the soluble sachets being a zero-waste solution, the packaging of SYR Essentials has been carefully considered to lessen any possible impact on the environment, with the sachets stored in easily resealable and recyclable waterproof stand up pouches.

In total, the planet-friendly packaging of SYR Essentials represents a 90% reduction in packaging waste over time, decreasing the amount of single use plastic ending up in landfill sites. Due to this reduction in packaging, and the lighter weight provided by the cardboard pouches and chemical sachets compared to standard bottles of solution, this range also contributes to a 95% decrease in carbon emission as a result of reduced transportation costs.

Instructions

Fill bottle with warm water. Never use boiling water.

Place the sachet into the bottle.

Screw head back on and shake the bottle.

Once sachet is completely dissolved it's ready to use.

Go one eco step further with our recycled 750ml bottle

Recycled 750ml Bottle

Heavy duty moulded recycled plastic bottle with calibration marking for easy chemical dilution. 2.8cm/ R3 screw thread.

🔧 S0011000-R **Recycled 750ml bottle**

Glimmer Clean

SYR Glimmer Clean is one of our most popular detergents. It is designed to be both an anti-static detergent and effective at removing soils and grease from windows and glass. 5 Litres.

Probe Wipe (Sanisafe)

Easy pull centre feed, only one wipe needed for best results. For probe sanitisation only. 200 wipes per container.

993058 **200x Probe Wipe**

Cleaners Essentials

With such a huge number of cleaning tools on the market, it can be a daunting prospect choosing the equipment that is right for your business' specific cleaning requirements. It is important to always remember that cleaning is not a 'one size fits all' process, and using the same tools for every cleaning task will likely not deliver a consistent cleaning standard, so carefully selecting the right equipment for each specific environment and its unique cleaning challenges is vital.

In operation for almost 70 years, SYR uses our decades of experience and expert knowledge in the cleaning industry to help our customers to meet a range of cleaning challenges. From recommending top products for cleaning important cleaning areas such as kitchens and washrooms, to organisation tips for your cleaning cupboard, SYR is passionate about finding the very best solutions for different cleaning requirements, for achieving an efficient and highly effective cleaning performance.

SYR Wall Mount Tool Holder

This smart holder keeps your cleaning cupboard looking neat and tidy. Several mounting configurations, to hold mops as well as safety signs.

S0630000 **SYR Wall Mount**

Shadow Boards

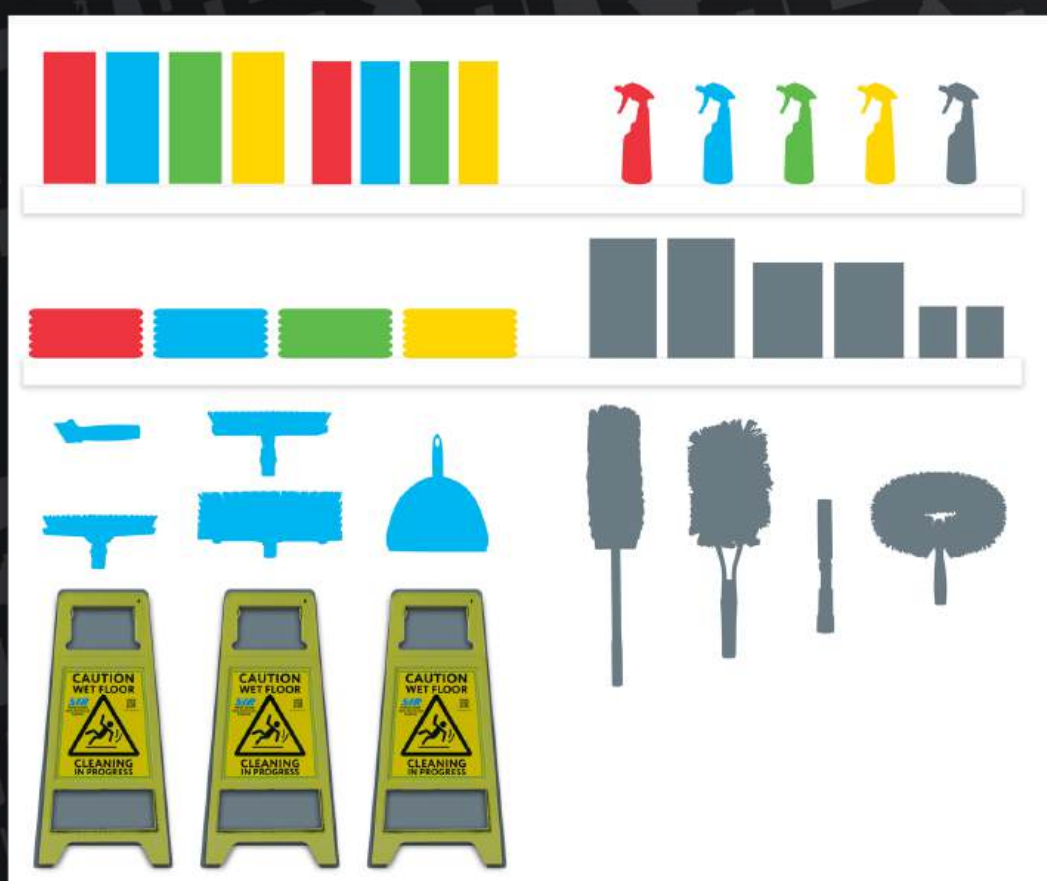

Benefits of shadow boards

> Improves efficiency:

As is stressed under the principles of the 5S system, the efficiency of cleaning teams will always be impaired if storage areas become messy or disorganised. In such areas it can be hard for operatives to find what they are looking for when they start their routines, leading to costly delays and even conflicts between staff if others are seen as responsible for mislaying tools. As shadow boards provide a clear system by which equipment is stored, tools can be found and returned in the same place each time, even when used by multiple different people, improving efficiency and creating a tidier environment.

> Encourages accountability in cleaning staff:

Even if there is a system in place by which equipment should be stored and cared for, it is still likely that standards may slip at some point, with an operative neglecting cleaning or storing a tool carelessly after a long, busy day. Although shadow boards cannot eliminate all behavioural factors, they have been found successful in encouraging staff to keep the area tidy, placing things back in the correct place when they have finished using them. As each tool can easily traced and identified when missing, it increases accountability in staff, ensuring they are following procedure each time they work.

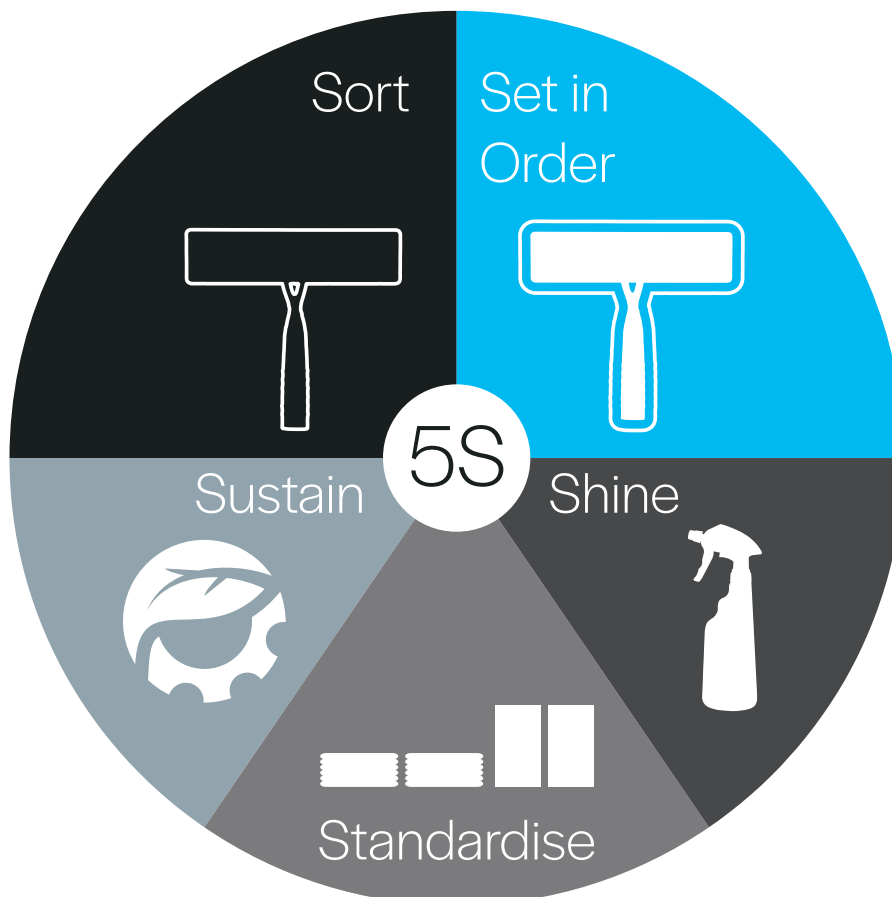

Ensuring your cleaning storage is clean, tidy and well-organised can be a crucial step in achieving efficiency across the entire cleaning schedule, allowing all cleaning tasks to get off to a good start and preventing delays or confusion caused by mislaid tools. There are a number of helpful measures that cleaning teams can take to improve the organisation of this area, but one system that has proven to be effective in encouraging compliance, offering a visual system for the storage of different tools, is the use of shadow boards.

Although they can take different shapes and sizes, both mounted to walls and free-standing, shadow boards are typically backboards printed with to-scale outlines of equipment, usually complete with fixings and holders to attach the corresponding tool to the board for storage. The best solution for simple and neat inventory of equipment, the 'shadows' on the boards are designed to make it immediately obvious to staff where tools should be stored and easy to identify when something is missing.

A shadow board functions similarly to labels, signs and floor markings in visually indicating where equipment belongs in the storage area, but goes an extra step in ensuring compliance to regulations and standards. Shadow boards represent a "common-sense approach", easy to understand and able to convey information at a glance, ensuring maximum efficiency. As it is a method of instruction not requiring language or any prior knowledge, shadow boards are also highly accessible, especially useful where there is a language barrier or other difficulties in staff understanding.

Now in use across multiple industries, shadow boards are usually custom printed, designed specifically to fit spaces and to suit each business' range of equipment. When included as part of an organised cleaning cupboard, boards typically contain space for daily cleaner's essentials, such as mops, buckets, safety signs and lobby pans. Proving particularly useful in busy environments that may be cleaned by larger teams of people, shadow boards are also often used to segregate colour-coded cleaning tools, helping to prevent cross-contamination while cleaning.

Perfect for businesses looking to reduce waste and maximise productivity, the use of shadow boards has often been associated with the lean 5S system, a methodology for organising work environments to achieve optimal efficiency. Originating in Japan in Toyota manufacturing sites, the system is based on the tenant that an orderly workplace is essential for a business to achieve consistently good operational results, thus stressing the importance of implementing effective organisation strategies.

Kitchens, Cafes & Restaurants

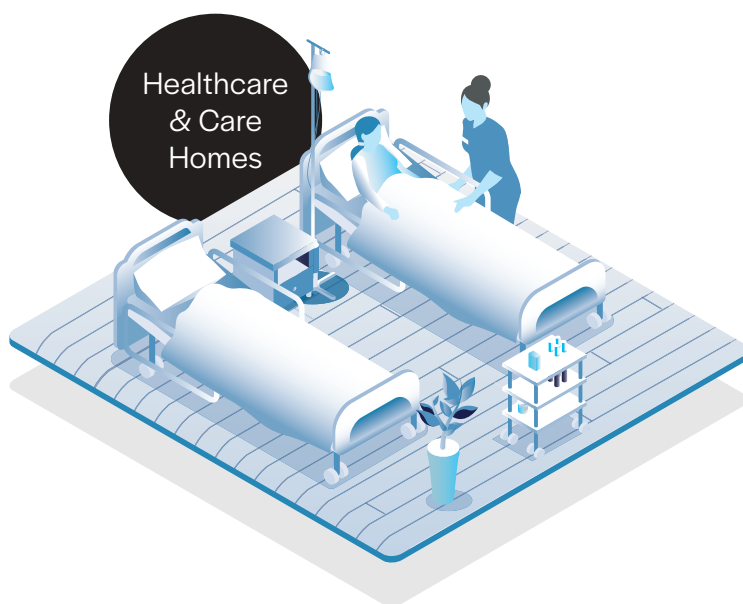

Versatile, durable cleaning systems are vital in these busy, high traffic areas to ensure the business stays running at maximum efficiency. The Rapid Response Kit is a quick and easy solution for spills and daily cleaning, whilst the LTS features a tall operating height, making it perfect for repeated daily use with risking strain injuries. Safety and hygiene are paramount in these environments, so use the durable TriChange mop, Grout Brush and Deck Scrubber to remove impacted grime from even small crevices, as well as the Plastic Squeegee to remove excess water after cleaning to prevent accidents.

Remember: use colour-coded products to designate different cleaning areas, such as kitchens, restrooms and front-of-house.

When cleaning these sensitive environments, it is vital that care is taken to reduce all risk of infection amongst at-risk patients or service users, so using disposable solutions where possible is recommended to prevent all cross-contamination between areas when cleaning. For surface cleaning, disposable solutions doesn't just mean paper towels; instead, switching to the Microfibre Cloth Roll will deliver a vastly improved cleaning performance, whilst still being a convenient and low cost solution. For mopping, flat mopping, in conjunction with the Motion Pro 2 trolley, is a more efficient system for this environment, used with SYR's Impregnated Cloths for rapid dry dusting.

Healthcare & Care Homes

Cleaning restrooms is challenging for the same reasons that it is so important; the large amounts of bacteria that can be found within. Using products that are expressly designed to be hygienic, such as Disposable Cloths, non-rotting SYRSorb mops and Abra (with its melamine foam sponge), is the best option for both cleaning effectively and reducing the risk of cross contamination. For floorcare, the Lucy-R Oval Bucket and Grout Brush are ideal, as compact and versatile solutions are recommended for restrooms, where space is often limited.

When cleaning areas in this industry efficiency is of utmost importance, as staff are often working to tight deadlines. The Motion Housekeeping Pro is SYR's best solution for hospitality environments, as it offers ample space for tools and necessary products, including a lockable internal cupboard and side storage bags, whilst still being easily manoeuvrable on silent glide castors. Similarly, the Rapid Response Kit is SYR's innovative spill system featuring a mobile caution cone for rapid and highly efficient cleaning and spill management. Both of these two systems are ideal for using with flat mopping systems, which in itself is proven to be more efficient than traditional string mopping.

Education sites are often high traffic areas, meaning that surface cleaning is more important than ever to make sure everyone stays safe. The MST is SYR's very best for touchpoint cleaning – using powerful microfibre performance pads, this innovative tool is capable of effortlessly removing dirt, dust and bacteria, erasing those sticky fingerprint marks from even mirrors, metal and laminate wood. In education environments, SYR also recommends implementing a flat mopping system as opposed to traditional string mopping, as it has been found to be a more efficient solution. As flat mopping requires less water than string mopping, it has the added bonus of leaving floors drier after cleaning, reducing the risk of accidents that may occur from children running on still slippery floors.

Cleaning offices can be tricky, as they are often crowded environments. A compact solution like the TC20-R mopping combo is ideal, but using it with the innovative 3-sided TriChange Mop allows it to clean larger floor areas quickly and efficiently. Touchpoint cleaning is also beneficial in office environments, removing contaminants before they can be passed between people, so an effective solutions for on-the-go cleaning, such as Super Cloths, the MST and the handy Cleaners Tool Belt, will help to halt the spread of infections.

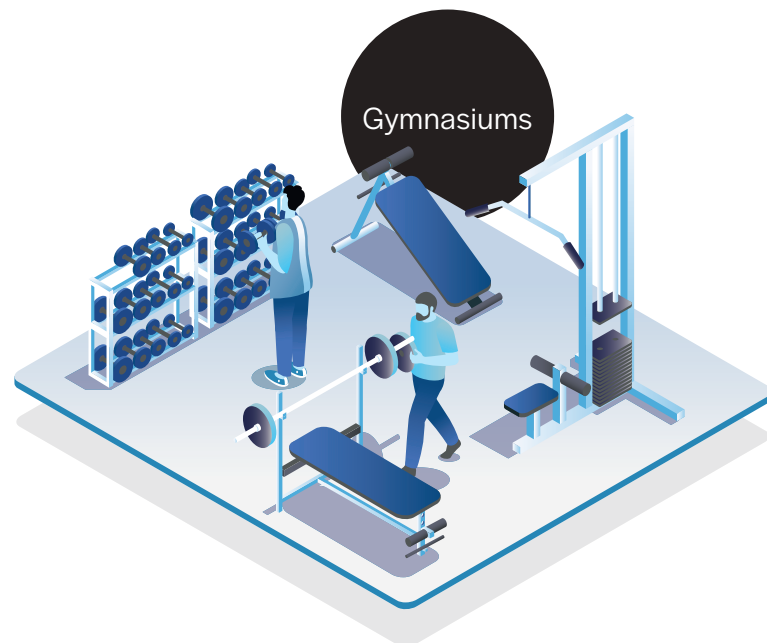

Cleaning large areas is easy with the Nomad Lite Scrubber Dryer, as it is effective on different hard floor types for a range of tasks, used with durable, non-clogging pads and brushes that remove even ground-in dirt with ease. Where using a floor machine is not practical, the LTS, Flat Mop Frame and Microfibre Mop can provide a similarly efficient cleaning experience. The LTS is designed to improve efficiency by offering a more comfortable operating experience for cleaning staff, preventing strain and reducing water waste with its powerful wringer, whilst microfibre flat mopping cleans quicker and more effectively compared to dolly mopping.

Gyms can often be sites where infections are transmitted easily due to the high number of touchpoints. To prevent the spread of bacteria, all gym equipment should be wiped down after use, with a durable high quality cleaning cloth such as Super Cloths, suitable for both dry dusting and wet wiping. Floors also need to be kept clean, dry and well-maintained to prevent accidents from occurring. SYR recommends the new Fluid II Bacteriostatic handle with the 2-in-1 mopping and drying Ultimate Delux Flat Mop for quickly and effectively taking care of spillages, as well as an efficient flat mopping system with the Duo Press mopping combo for general floor cleaning.

Industrial & Warehouses

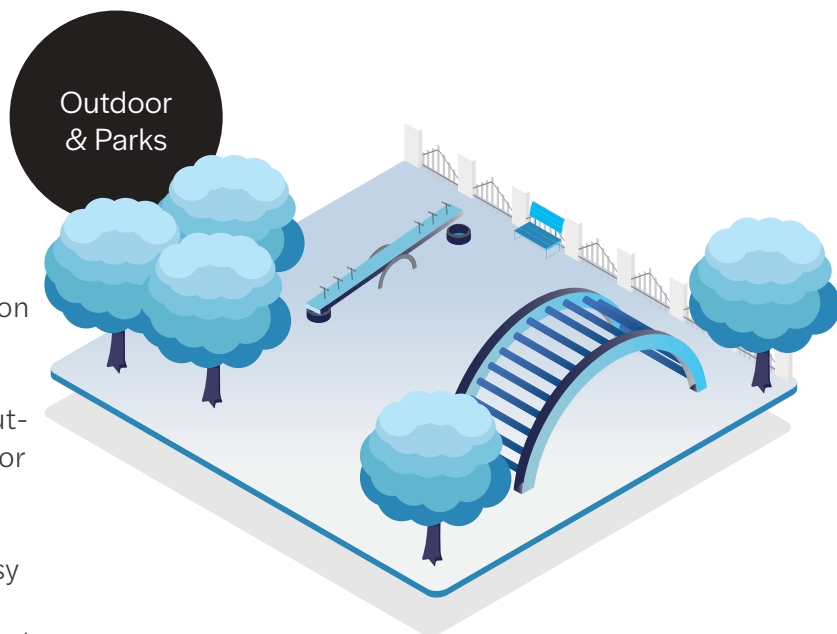

It is important to keep warehouses and industrial sites clean and well-maintained to prevent accidents in these sometimes hazardous areas. Regular cleaning with the LTS and TriChange Kentucky mop will help to keep floors in good condition, using the Grout Brush for detail work and the Corn Broom for greasy areas. In these busy environments spills and breakages often occur, so solutions like the Rapid Mop, to quickly mop up spillages, and the Lobby Spill Kit, capable of both squeegeeing up liquids and sweeping up breakages, are essential. For cleaning other surfaces, Super Cloths are ideal, with the durable, high tensile material performing effectively in industrial areas that are often very dirty and dusty.

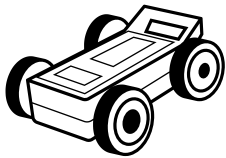

Outdoor cleaning may sometimes be overlooked, but it is vital in ensuring that good presentation is maintained. Do not use any of your indoor cleaning tools to clean outside as this could be a contamination risk and will likely not achieve a sufficient standard of clean; opt instead for more durable solutions like the Large Heavy Duty Hard Broom to tackle tough outdoor messes, as well as hygienic Disposable Cloths for cleaning surfaces. Litter is not just an eyesore; it can also be a health and environmental hazard. Use the Trigger Litter Picker for hands-free, hygienic and easy pick-up of litter, and sweep away and collect waste with the Enclosed Lobby Pan, to keep all litter safe and secure until it can be disposed of.

Outdoor & Parks

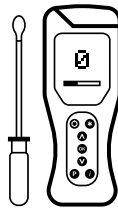

The SYR TechTeam, comprised of skilled professionals with years of industry experience and a passion for advanced cleaning practices, offers a bespoke service. Through analysing your existing cleaning practices and producing a detailed site survey, they will help your business identify your cleaning needs and offer exclusive advice and recommendations. No matter where you or your customers are in the UK, a member of the TechTeam will arrange a suitable time to visit – and the best part is that it is a completely free service for all SYR customers.

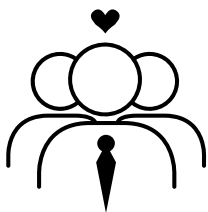

Slip fall testing
